

Contents

1	High-dimensional, or nonparametric statistics	5
1.1	Asymptotics in smooth, parametric models	5
1.2	High-dimensional and nonparametric models	7
1.3	Exercises	12
2	The signal-in-white-noise model	15
2.1	Definition of the model	15
2.2	Brownian motion and Wiener integrals	16
2.3	Sequence formulation of the model	18
2.4	Expressions for the likelihood	19
2.5	Asymptotic equivalence of nonparametric models	21
2.6	Exercises	25
3	Stein's phenomenon, regularization	27
3.1	The James-Stein theorem	27
3.2	Regularization in the white noise model	30
3.3	Regularization in other models	35
3.4	The bias-variance trade-off and convergence rates	38
3.5	Exercises	47
4	Lower bounds for testing	51
4.1	Statistical tests in the white noise model	51
4.2	Two simple hypotheses	52
4.3	Composite alternative hypothesis	55
4.4	Testing multiple hypotheses	59
4.5	Exercises	63
5	Lower bounds for estimation	65
5.1	Minimax lower bounds for estimation	65
5.2	Connection to multiple hypotheses testing problems	66
5.3	Minimax risk and Bayes risk	68
5.4	Lower bounds for estimating smooth functions	70
5.5	Minimax lower bounds in other statistical settings	73
5.6	Exercises	76

6 Adaptive estimation	79
6.1 Adaptation and data-driven tuning	79
6.2 Lepski’s method	80
6.3 Exercises	84
Bibliography	85
